

PROBOX C Corridor

ProBox C corridor – The Probox C is mounted near the ceiling in a corridor outside the rear wall of the Cinema auditorium. Probox C is separated from the auditorium by a projection window. Access to the projector is provided by means of a technical platform made of steel (WEMA gratings). The platform is fixed to the wall separately from the Probox C, in order to prevent vibration being transferred to the screen image. The platform is only used by maintenance staff for limited periods of time and does not change the classification of the building as a one-storey building.

- Max. weight of lift projector up to 300 kg/ 660 lbs
- Noise at 2 m (Barco DP2K-20C) 35 dB
